Description: an image search cli or api. Given a set of images, a user can search for text occurance, scene, color, objects, features, etc.

Functionality:

1. Users/Admin can add an image to be indexed
2. Admin can remove images
3. Users can query for images
4. Users can query via rest api
5. Admins can give access to rest api
6. Admins can revoke access to rest api
7. Users can add their own image tag or request it be tagged through cloud service
8. Users can request a list of images they added
